

## **Dosage and Use**

**A 2% solution (20 grammes/litre) has a high level disinfecting/cold sterilizing action.**

**A 1% solution (10 grammes/litre) has a decontaminating and disinfecting action.**

**Preparation of liquid solution:**

- **pour the necessary quantity of lukewarm water into a container;**
- **pour the powder into water, according to the quantities indicated, depending on the action to be carried out (decontaminating, disinfecting, high level disinfecting/cold sterilizing action);**
- **mix until the powder is dissolved.**

**After a few minutes the solution is ready to be used.**
